

X Chromosome Testing

We are now able to offer female Registrants the additional X chromosome test at a rate of £120 (plus VAT) for the Registrant and £120 (plus VAT) for her biological mother.

The test is only available when both biological mothers of the Registrants concerned are able to provide a DNA sample.

UK DonorLink are happy to be contacted for further discussion about the standard DNA test and the optional X chromosome test. Both the standard and optional tests utilize DNA information from one DNA sample. Only one DNA sample need be taken. The X chromosome test is offered only in conjunction with the standard test.

Please indicate your wishes about the standard and optional tests on the Registration / Consent Form.

All Registrants are contacted in person prior to DNA Testing to discuss the DNA test and their registration in general.
